

IT Solutions built on Engineering Skills and Experience.

What is Eng-IT™?

The Eng-IT™ Project Management Methodology is a unique synthesis of traditional, proven engineering processes, combined with the latest software development practices. This methodology has been the basis for VRT Systems' success since the late 80's.

Why Do You Need Eng-IT™?

The main focus of the Eng-IT™ methodology is to provide world-class project management solutions that meet or exceed the standards expected by our clients, on time and within budget.

Statistics show that as many as 50% of IT projects fail. 80% of these failures can be directly attributed to poor definition of user requirements or inefficient project management.

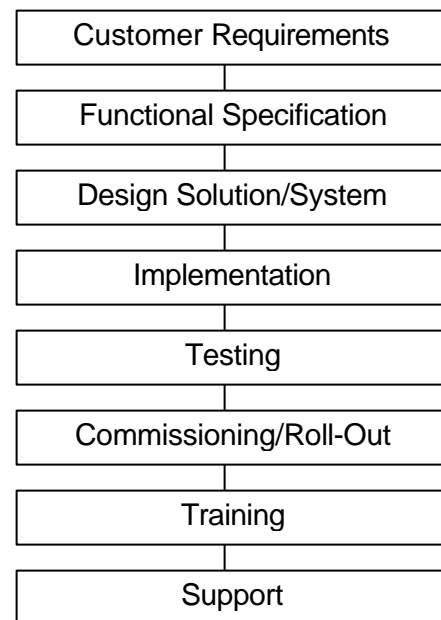

What are the Benefits to You?

- Provides the framework and discipline to manage complex projects.
- Eng-IT™ determines and clearly defines customer requirements. It then guarantees that those requirements are met.
- Regular reviews throughout the process keeps the project on track.
- Eng-IT™ is sufficiently flexible to satisfy the requirements of both small and large projects.
- The modular architecture of Eng-IT™ allows for scalability.

How is Eng-IT™ Different?

The Eng-IT™ methodology combines the best of engineering and IT practices. It recognises the importance of integrating a comprehensive quality management program throughout each phase of the project, culminating in total quality management across the full system lifecycle.

Implementation Process

The Eng-IT™ process is constantly managed under a quality management overlay which includes proper contract management.

Eng-IT™ is a periodic process with regular reviews throughout its lifecycle ensuring total customer satisfaction is achieved.
