

WideSky™ TenantView is the simplest and most reliable way to visualise and understand your utility usage.

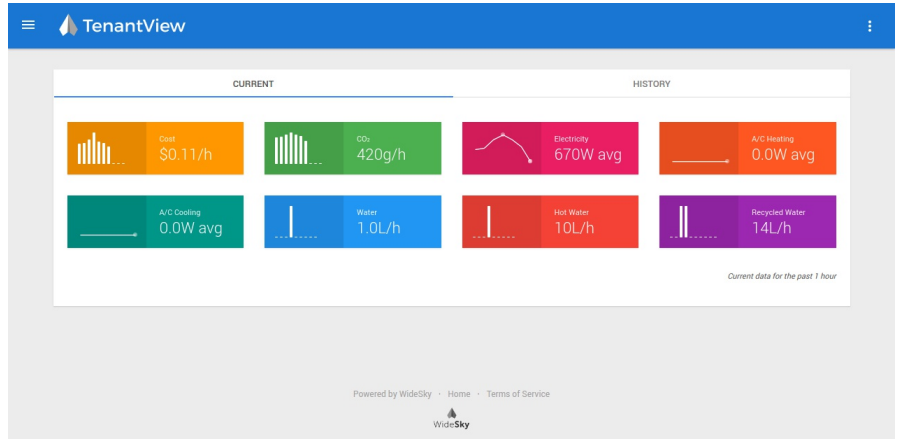

Widesky tracks the data from your utility meters and TenantView analyses and displays simply on any computer or device. Track your usage, and take deliberate actions to save money!

WideSky TenantView

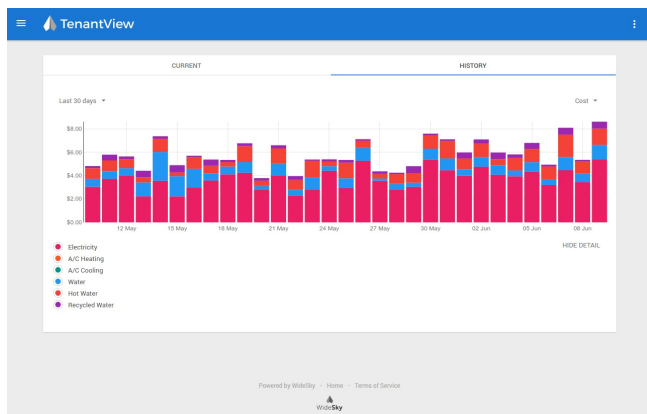

WideSky™ TenantView delivers insight to your utility usage to any device. Real-time data feeds from current utility usage enable users to learn how their behaviour impacts costs. Simple changes of habits lead to \$\$ in savings!

Realtime

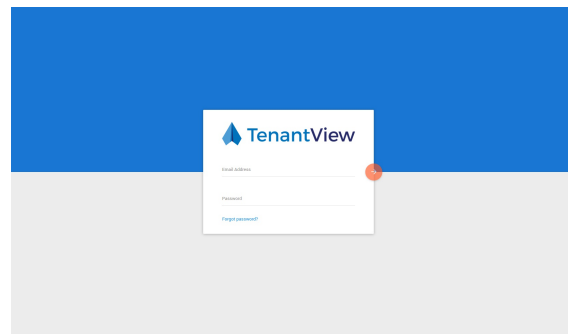

Historical

- Leveraging off the advanced data collection that is built into all Widesky installations, VRT has created a smart application that reads all the sub meters and present the data to the Tenant in a useful and meaningful way.
- The Widesky TenantView application is web based, HTML5, so works equally well on any of your devices as well as desktop.
- Watch the current day's usage, and attempt to minimise. Leads to money saving for the Tenant, and a greener building.
- TenantView can be adapted to anything that Widesky measures. So able to display not only utility information, but can link to current temperature, humidity, or anything that Widesky measures and stores.

Simplicity

- The TenantView application is simple in its presentation, but incredibly powerful in its ability to take complex data and present to the Tenant in a way that can be understood, and actioned in a meaningful way.

Administrator

The screenshot shows the TenantView Administrator interface. It features a blue header with the TenantView logo and a menu icon. Below the header, there is a form titled 'Basic Information' with fields for 'Full Name', 'Email address', and 'Apartments'. At the bottom, there is a 'CLEAR' button and a 'Save' button. At the bottom of the page, it says 'Powered by WideSky'.

- Widesky TenantView is right for you!
